WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, the total strength of the reporting units as shown herein has been consistently about one percent below the actual strength of the Army in the Continental United States.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases hospitalized or confined to quarters and excused from duty for 24 hours or longer, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all traumatisms other than battle casualties (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, and reactions to medications as well as various types of wounds not due to enemy action). Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. This ratio may not be significant when the strength of a Command is changing markedly or when a Command has a relatively large number of General Hospitals.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 25 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table.

HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of total beds authorized and total beds occupied.

Unless otherwise specified, beds authorized as shown in this report are defined in par. 36h of AR 40-1080, C 2. Total beds include expansion beds in addition to normal beds. Beds in dispensaries, convalescent facilities, venereal disease facilities, and college or university training units are not included in the tabulations for individual stations.

Regional Hospitals are distinguished from Station Hospitals by the letters (RH) appearing after the name of the station. Likewise Convalescent Hospitals are denoted by the letters (CH).

In the case of General Hospitals there are shown, in addition, the number of Army patients admitted, the number disposed of during the week (by return to duty, transfer, death, CDD, or otherwise), and the number of such patients remaining in hospital (including convalescent facilities, if any) at the end of the week, subdivided by disease, injury, and battle casualty patients. The patient days of treatment are presented separately for hospital and for convalescent facilities. The bed capacity and beds occupied in convalescent facilities are also indicated.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

WEEKLY HEALTH REPORT

FOR THE WEEK ENDING 11 AUGUST 1944

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

During the week ending 11 August 1944 the admission rate from all causes increased slightly to 548 per year per thousand strength, which is about 2 percent above the rate for the previous week and only about 3 percent above the minimum rate for the year recorded at the end of June. During the past 11 weeks the admission rate from all causes has fluctuated within the rather narrow range from 530 to 566 per thousand.

The current week's admission rate from all diseases combined increased by about 4 percent to 477 per thousand, which is about 25 percent lower than for the corresponding week of 1943.

Morbidity from injury decreased to 71 per thousand, as contrasted with a rate of 75 per thousand for the previous week. The current week's admission rate from injury is almost 30 percent lower than for the corresponding week of 1943.

Respiratory Causes:

Morbidity from colds, influenza, etc. remained at 67 per thousand strength or about 25 percent under the rate for the corresponding week of 1943. For the past 7 weeks the admission rate from colds, influenza, etc. has varied only within the narrow limits of 65 to 68 per thousand, which is considerably below the lowest rate experienced during any week of 1943 (85 per thousand).

The admission rate from pneumonia increased slightly to 6 per thousand which is about one-third lower than for the corresponding week of 1943.

Common Communicable Diseases:

Morbidity from venereal disease, excluding cases contracted prior to entry into active service, increased by about 10 percent to 35 per thousand, one of the highest rates recorded so far this year but under the peak rate of 39 per thousand registered for the week ending 28 July. Current morbidity from these causes is about 30 percent higher than during the corresponding period of 1943.

The admission rate from diarrhea and dysentery continued at 11 per thousand or less than half the rate for the corresponding week of 1943.

The number of new cases of mumps which had been running at a level of about 150 cases per week since the middle of July decreased sharply to less than 90 cases for the current week, which is considerably fewer than during the corresponding week of 1943, but at about the same figure as during the fall months of 1943 when the seasonal minimum was recorded. The number of new cases of meningitis again decreased notably and was reported at the lowest figure for the past 12 months. The number of new cases of rheumatic fever continued at about the same level as for the previous week. The number of cases of poliomyelitis reported for the current week was 6, the same as two weeks ago and the highest number so far reported this year.

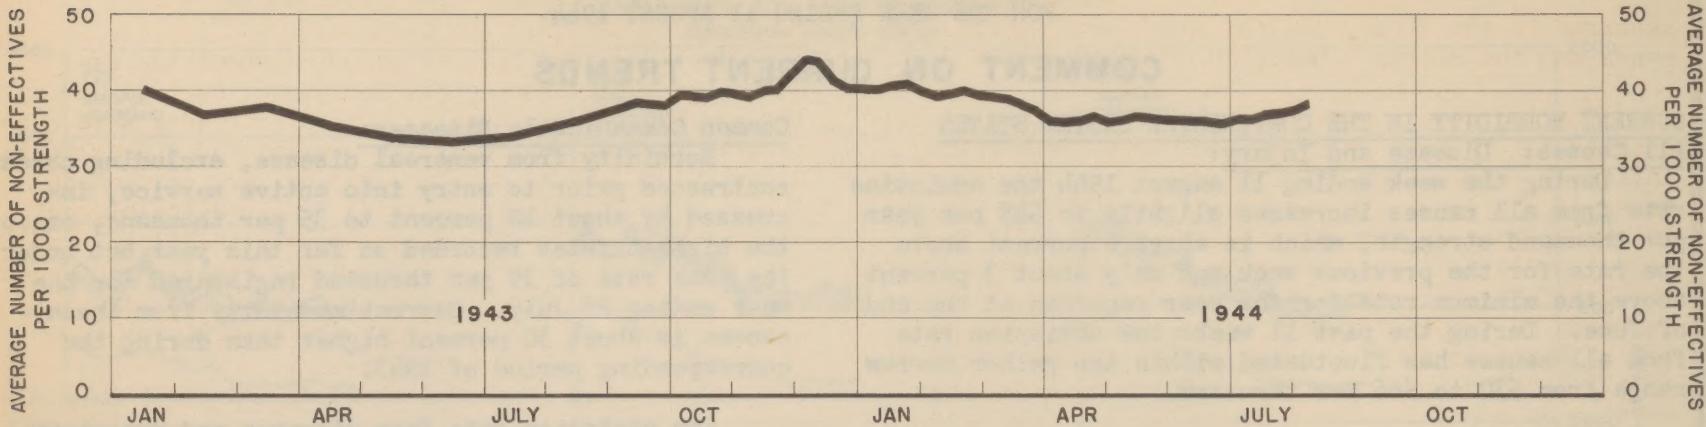

VARIATIONS IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

The admission rate from disease increased in all service commands except the Fifth where a slight decrease was recorded. Increases of 5 percent or more

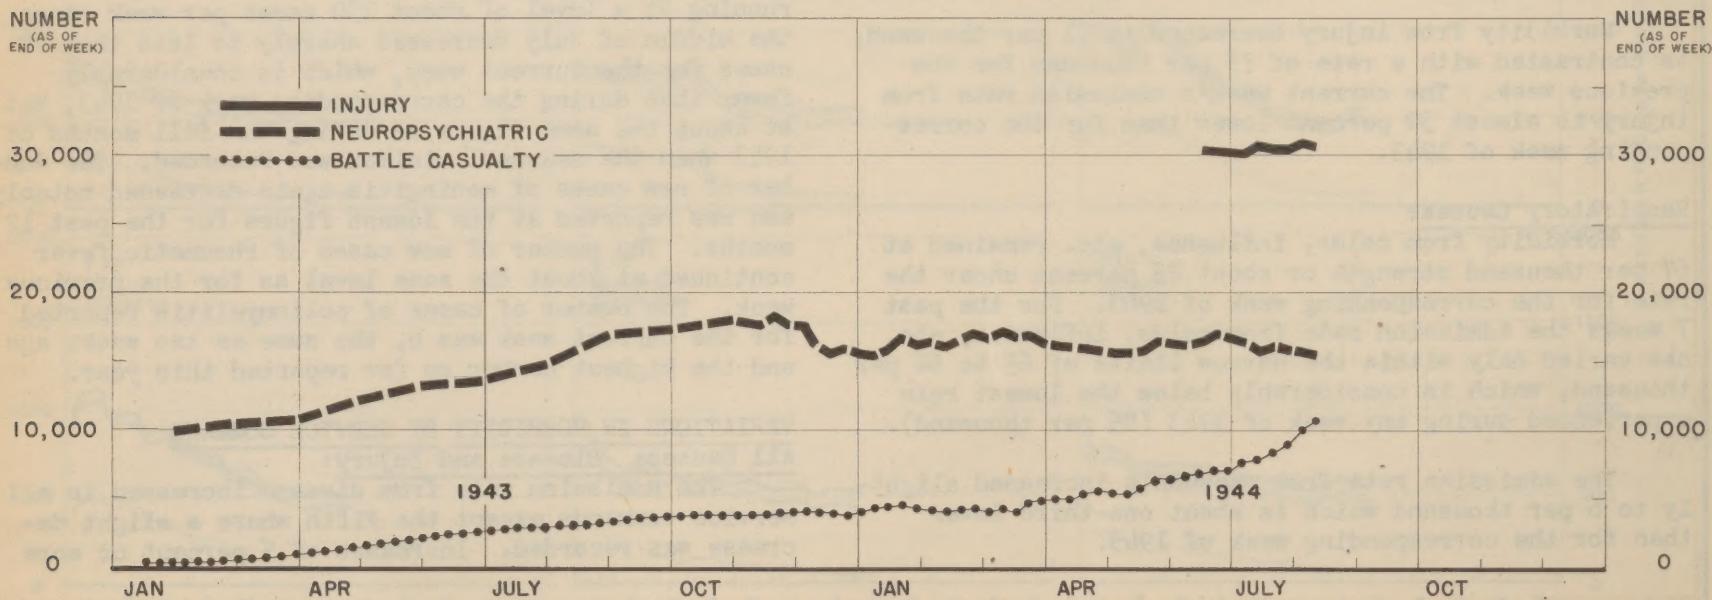

NON-EFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING UNDER TREATMENT

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT'D)

occurred in the First, Second, and Fourth Service Commands and the Military District of Washington.

The increase in the First Service Command was accounted for in part by higher morbidity from colds, influenza, etc., from diarrhea and dysentery, and from venereal diseases. In the Second Service Command the increase arose as a result of higher morbidity from colds, influenza, etc. and from venereal diseases. In the Fourth Service Command a sizeable portion of the increase in morbidity was attributable to a large number of cases admitted for purposes of discharge under AR 615-368 and 615-369 at Ft. McPherson, Ga. (which station as a result showed unusually high admission rates from all causes and from disease).

The Military District of Washington reported the highest morbidity from all causes (645 per thousand) and from disease (583 per thousand); this Command frequently shows relatively high morbidity arising in part from admissions of casualties passing through Washington, D.C. (generally treated at Ft. Myer). The lowest morbidity from all causes and from disease was again reported by the Eighth Service Command with rates of 511 and 429 per thousand respectively.

Sharp decreases in the admission rate from injury were reported by the Second, Fifth, Eighth and Ninth Service Commands, while increases were registered only in the Sixth and Seventh Service Commands and the Military District of Washington. The Eighth Service Command, although having a notably lower rate than the previous week, continued to report the highest morbidity from this cause (82 per thousand). All Service Commands with the exception of the Eighth and Fifth reported morbidity from injury of less than 70 per thousand.

Respiratory Causes:

Most Service Commands reported about the same admission rates from colds, influenza, etc. as during the previous week. However, sharp increases were registered in the Second Service Command and the Military District of Washington. The Second Service Command with a rate of 102 per thousand reported the highest morbidity from these causes; this was the first time in 7 weeks that any Service Command has experienced a rate of 100 per thousand or more. The Fifth and Seventh Service Commands reported the lowest morbidity from these causes (59 per thousand).

The highest morbidity from pneumonia was reported by the Sixth Service Command whose rate of 11 per thousand was almost double that for the country as a whole. All other Service Commands had morbidity from this cause very closely approximating the average for the United States.

Common Communicable Diseases:

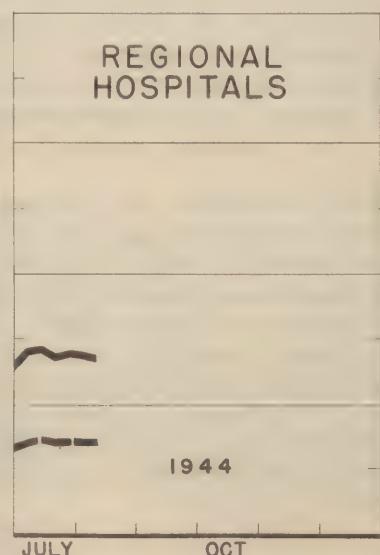

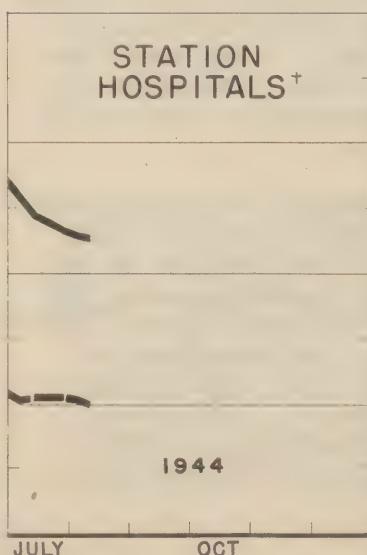

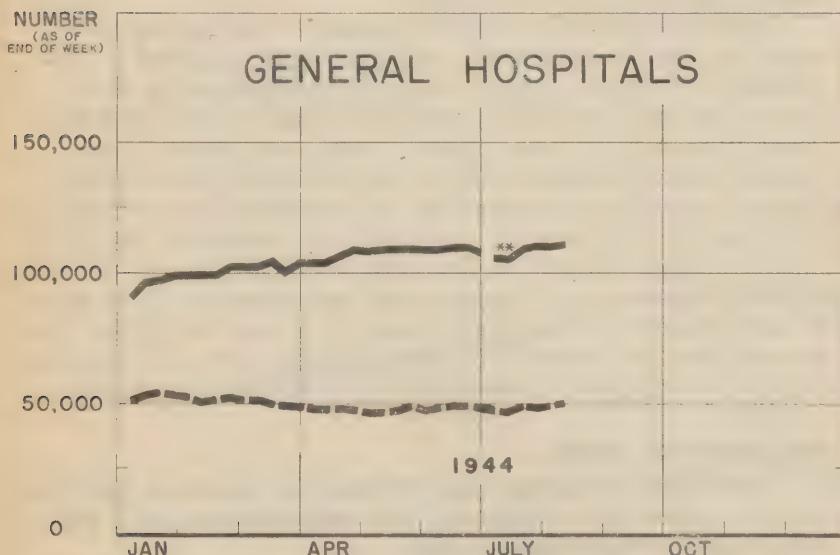

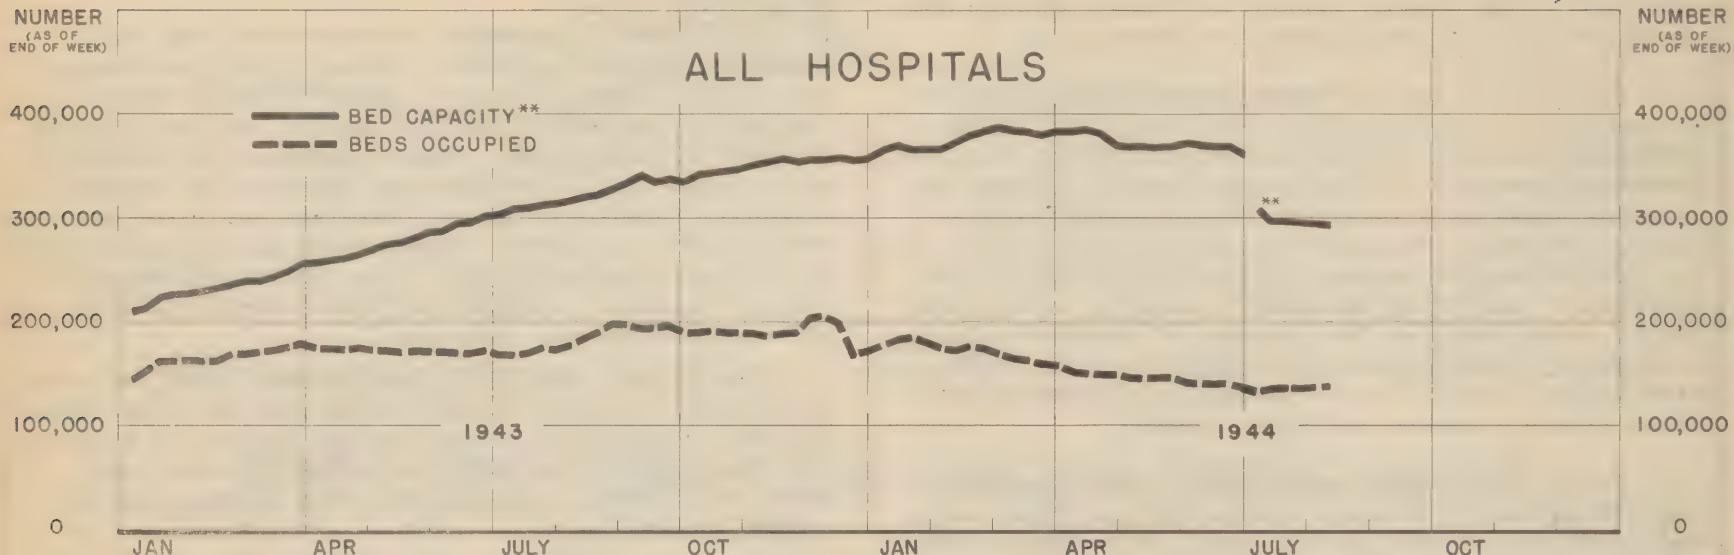

Morbidity due to "new" venereal (excluding EPTS) cases increased in almost every Service Command. Increases of 20 percent or more were recorded in the First, Second, and Sixth Service Commands and the Military District of Washington. Both the Second and Fifth Service Commands reported morbidity from these causes somewhat in excess of 50 per thousand, while the First and Sixth Service Commands had rates of about 45 per thousand. Only the Seventh Service Command and the Military District of Washington had rates of less than 30 per thousand. The relatively high morbidity in the Second Service Command is due in large part to the incidence among task force troops not under its jurisdiction.

NON-EFFECTIVE RATE:

The non-effective rate showed an increase for the fourth consecutive week and was reported at 38.1 per thousand for the current week.

ARMY SERVICE FORCES, OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION, HEALTH REPORTS BRANCH

COMMENT ON CURRENT TRENDS (CONT'D)

PATIENTS REMAINING UNDER TREATMENT:

The total number of Army patients remaining in hospital at the end of the week represented a rate of 37.3 per thousand strength, or the same as the previous week. The number of neuropsychiatric cases remaining as of 11 August 1944 was reported at 15,490 or about 100 less than the previous week.

The number of non-battle injury patients remaining under treatment in hospital and quarters as of 11 August 1944 totaled about 30,600. The number of battle casualty patients remaining increased to 10,724; all but 341 of these were in General Hospitals (201 of the 341 were at Mitchel Field).

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 11 August 1944 the total number of enlisted men discharged by CDD was 3,309 or about the same as the previous week and the highest number recorded since such data have been reported (in July and subsequent). Almost one-half of these discharges were reported by General Hospitals.

CURRENT HOSPITAL CONDITIONS:

The total authorized beds as of 11 August 1944 numbered about 293,000, or about 1,000 less than at the end of the previous week. The total number of beds occupied was 136,000 (or 47 percent of the total beds authorized) which was about 1,000 less than at the end of the previous week. Included in the total authorized beds were 258 T/O hospital beds and tentage, none of which were occupied.

The total authorized beds in General Hospitals numbered 111,276 which was an increase of about 1600 over the previous week, principally due to the opening of Vaughn G. H. The total number of beds occupied in General Hospitals was 50,034 (or about 45

percent of the authorized beds) which was about 1,000 more than at the end of the previous week.

Station hospitals (as distinct from Regional Hospitals) reported about 114,000 total authorized beds, while Regional Hospitals reported about 68,000 beds. The number of beds occupied at station hospitals was about 50,000 or 44 percent of total authorized beds. The beds occupied at Regional Hospitals numbered about 36,000 or 53 percent of total authorized beds. Eight stations (De Ridder AAB, La., Brookley Field, Ala., Aliceville PW Camp, Ala., Mississippi Ordnance Plant, Miss., Camp Adair, Ore., Hamilton Field, Calif., Lemoore AAF, Calif. and Stockton Ordnance Depot) reported more beds occupied than authorized beds.

Included among the station hospitals are eight which are designated as Convalescent Hospitals (ZI); these reported 2,999 authorized hospital beds (1,568 occupied) and in addition 12,756 beds in convalescent facilities (1000 occupied). The increase in convalescent facilities beds arises from the initial reporting of the convalescent hospital at Camp Lockett, Calif.

The bed capacity of convalescent facilities in General Hospitals was 19,437. The total beds occupied in such convalescent facilities was 6,680 or 34 percent of the total bed capacity.

SUPPLEMENTARY HEALTH REPORT

CONVALESCENT FACILITIES AT REGIONAL AND STATION HOSPITALS

Data regarding convalescent facilities at Regional, Convalescent, and Station Hospitals as of 28 July 1944 are shown on page 34. Corresponding data for General Hospitals as of the same date were published in the Weekly Health Report No. 30 (pages 28 to 31).

As of 28 July 1944, convalescent facilities were reported by 20 Regional Hospitals (out of a total of 57 such hospitals in operation), by 5 Convalescent Hospitals (not including one special Convalescent Hospital, Old Farms C.H., Conn.) and by 19 Station Hospitals. The total bed capacity of convalescent facilities at these 45 hospitals was 17,337; 5,692 of these beds (or 33 percent) were occupied. The convalescent bed capacity of 17,337 at these 45 hospitals is about 5,000 greater than as of 30 June 1944 when only 41 hospitals reported convalescent facilities. Most of the increase in bed capacity is accounted for by the opening at the end of July of the Convalescent Hospital at Daytona Beach, Fla. which has a capacity of 3,650 beds; none of these were occupied on 28 July.

In comparison with the convalescent facilities at the 45 Regional, Convalescent, and Station Hospitals, some 39 General Hospitals (out of a total of 58) reported as of 28 July 1944 a total convalescent bed capacity of 17,985; of these 6,207 (or 35 percent) were occupied. Thus, the convalescent facilities at Regional, Convalescent, and Station Hospitals had about the same number of convalescent facilities beds and somewhat fewer beds occupied than the convalescent facilities at General Hospitals.

The Eighth Service Command had the greatest number of convalescent facilities beds (about 30 percent of the U.S. total), closely followed by the Fourth and Seventh

Service Commands (with 25 and 20 percent respectively).

Five Convalescent Hospitals reported 8,400 convalescent facilities beds of which only 973 (or 12 percent) were occupied. Since these installations have been set up quite recently, the proportion of beds occupied is still very low but may be expected to increase steadily in the near future.

In connection with the reports on the reconditioning program to be published in the future, it is intended to give more detailed analyses of the convalescent facilities at Regional and Station Hospitals. However, it should be noted that many hospitals will maintain reconditioning programs even though they have no buildings specially designated as convalescent facilities (see par. 36b(3), AR 40-1080 for definition of this term).

During the four week period ending 28 July 1944 the number of enlisted men discharged by CDD at the Convalescent Hospitals was 178, distributed as follows:

Old Farms, Conn.	---
Daytona Beach, Fla.	—
Nashville AAC, Tenn.	16
Logan, Ft., Colo.	90
Albuquerque, N. Mex.	8
Geo. Wright, Ft., Oreg.	64
